Mark A. Miller

Voice Over IP Technologies: Building the Converged Network (M&T Books) Mark A. Miller
"Voice over IP Technologies" provides solid technical information on how to successfully design and implement a converged network, combining voice, data, fax and video transmissions into a cohesive networking infrastructure centered on the Internet Protocol. Converged networks, which combine voice, data, fax and video transmissions into a cohesive networking infrastructure - all centered on the Internet Protocol, or IP - promise a number of advantages over existing, separate networking environments. But to successfully design and implement a converged network requires expertise on both the voice and data networking sides of the house. Unfortunately, few individuals have these credentials - either you are a voice networking expert, and familiar with circuit switching and connections between PBXs, or you are a data networking expert, familiar with packet switching and connections between routers and servers. The objective of this text is to bridge the gap between the voice and data networking sides, and provide the reader with the opportunity to fill in their areas of weakness with solid technical information. In addition, this text presents a number of case studies, from architectural, financial and technical perspectives that illustrate real-world applications for these technologies.

From reader reviews:

Mollie Walker:

Do you have favorite book? When you have, what is your favorite's book? E-book is very important thing for us to know everything in the world. Each guide has different aim or maybe goal; it means that publication has different type. Some people truly feel enjoy to spend their the perfect time to read a book. They are reading whatever they consider because their hobby will be reading a book. Think about the person who don't like reading a book? Sometime, person feel need book when they found difficult problem or even exercise. Well, probably you will need this Voice Over IP Technologies: Building the Converged Network (M&T Books).

Doreen Harry:

Have you spare time for the day? What do you do when you have more or little spare time? Yes, you can choose the suitable activity with regard to spend your time. Any person spent their spare time to take a walk, shopping, or went to the Mall. How about open or read a book entitled Voice Over IP Technologies: Building the Converged Network (M&T Books)? Maybe it is to be best activity for you. You already know beside you can spend your time with the favorite's book, you can smarter than before. Do you agree with its opinion or you have various other opinion?

James Walton:

What do you about book? It is not important along with you? Or just adding material when you really need something to explain what you problem? How about your free time? Or are you busy man? If you don't have spare time to complete others business, it is give you a sense of feeling bored faster. And you have extra time? What did you do? All people has many questions above. They need to answer that question due to the fact just their can do which. It said that about publication. Book is familiar on every person. Yes, it is correct. Because start from on kindergarten until university need this kind of Voice Over IP Technologies: Building the Converged Network (M&T Books) to read.

Denise Church:

A lot of guide has printed but it is different. You can get it by net on social media. You can choose the most beneficial book for you, science, comedian, novel, or whatever through searching from it. It is identified as of book Voice Over IP Technologies: Building the Converged Network (M&T Books). You can add your knowledge by it. Without making the printed book, it might add your knowledge and make an individual happier to read. It is most critical that, you must aware about book. It can bring you from one spot to other place.
