Evolutionary Neuroscience

Evolutionary Neuroscience

Evolutionary Neuroscience is a collection of articles in brain evolution selected from the recent comprehensive reference, *Evolution of Nervous Systems* (Elsevier, Academic Press, 2007). The selected chapters cover a broad range of topics from historical theory to the most recent deductions from comparative studies of brains. The articles are organized in sections focused on theories and brain scaling, the evolution of brains from early vertebrates to present-day fishes, amphibians, reptiles and birds, the evolution of mammalian brains, and the evolution of primate brains, including human brains. Each chapter is written by a leader or leaders in the field, and has been reviewed by other experts. Specific topics include brain character reconstruction, principles of brain scaling, basic features of vertebrate brains, the evolution of the major sensory systems, and other parts of brains, what we can learn from fossils, the origin of neocortex, and the evolution of specializations of human brains. The collection of articles will be interesting to anyone who is curious about how brains evolved from the simpler nervous systems of the first vertebrates into the many different complex forms now found in present-day vertebrates. This book would be of use to students at the graduate or undergraduate levels, as well as professional neuroscientists, cognitive scientists, and psychologists. Together, the chapters provide a comprehensive list of further reading and references for those who want to inquire further.

- The most comprehensive, authoritative and up-to-date single volume collection on brain evolution
- Full color throughout, with many illustrations
- Written by leading scholars and experts

From reader reviews:

Matthew Blackburn:

Typically the book Evolutionary Neuroscience has a lot of knowledge on it. So when you read this book you can get a lot of profit. The book was written by the very famous author. The author makes some research ahead of write this book. This specific book very easy to read you can obtain the point easily after reading this article book.

Nancy Jackson:

Why? Because this Evolutionary Neuroscience is an unordinary book that the inside of the reserve waiting for you to snap the idea but latter it will surprise you with the secret the idea inside. Reading this book adjacent to it was fantastic author who have write the book in such wonderful way makes the content on the inside easier to understand, entertaining way but still convey the meaning fully. So , it is good for you for not hesitating having this anymore or you going to regret it. This amazing book will give you a lot of advantages than the other book get such as help improving your proficiency and your critical thinking technique. So , still want to delay having that book? If I had been you I will go to the guide store hurriedly.

Bryon Diaz:

Your reading sixth sense will not betray you actually, why because this Evolutionary Neuroscience book written by well-known writer who really knows well how to make book that may be understand by anyone who else read the book. Written within good manner for you, leaking every ideas and creating skill only for eliminate your personal hunger then you still question Evolutionary Neuroscience as good book but not only by the cover but also with the content. This is one reserve that can break don't judge book by its protect, so do you still needing another sixth sense to pick that!?! Oh come on your looking at sixth sense already alerted you so why you have to listening to another sixth sense.

Delaine Valencia:

Many people spending their time period by playing outside using friends, fun activity with family or just watching TV all day long. You can have new activity to spend your whole day by looking at a book. Ugh, ya think reading a book can really hard because you have to bring the book everywhere? It okay you can have the e-book, having everywhere you want in your Smart phone. Like Evolutionary Neuroscience which is getting the e-book version. So , try out this book? Let's see.
