Radiative Transfer in the Atmosphere and Ocean (Cambridge Atmospheric and Space Science Series)

Gary E. Thomas, Knut Stamnes

This text provides a foundation in both the theoretical and practical aspects of radiative transfer, for advanced students of atmospheric, oceanic and environmental sciences. The transfer of solar and infrared radiation through optically-thick clouds, aerosol layer, and the oceanic mixed layer is presented through the use of heuristic models of scattering and absorption, and a systematic approach to formulation and solution of the radiative transfer equation. Problems such as the transmission of ultraviolet radiation through the atmosphere and ocean, remote sensing, solar heating and infrared cooling processes, UV biological dose rates, and greenhouse warming are solved using a variety of methods. This self-contained, systematic treatment will prepare students from a range of disciplines in problems concerning the effects of solar and infrared radiation on natural systems. The hardback edition received excellent reviews.

From reader reviews:

Rose Slagle:

Book is written, printed, or created for everything. You can understand everything you want by a book. Book has a different type. As it is known to us that book is important matter to bring us around the world. Close to that you can your reading proficiency was fluently. A publication Radiative Transfer in the Atmosphere and Ocean (Cambridge Atmospheric and Space Science Series) will make you to become smarter. You can feel considerably more confidence if you can know about everything. But some of you think which open or reading a new book make you bored. It isn't make you fun. Why they may be thought like that? Have you in search of best book or suitable book with you?

Millard Espinoza:

It is possible to spend your free time to see this book this reserve. This Radiative Transfer in the Atmosphere and Ocean (Cambridge Atmospheric and Space Science Series) is simple to develop you can read it in the park, in the beach, train as well as soon. If you did not get much space to bring the printed book, you can buy typically the e-book. It is make you easier to read it. You can save the particular book in your smart phone. Consequently there are a lot of benefits that you will get when you buy this book.

Edna Spalding:

As a pupil exactly feel bored to help reading. If their teacher inquired them to go to the library or make summary for some book, they are complained. Just little students that has reading's internal or real their pastime. They just do what the trainer want, like asked to the library. They go to there but nothing reading really. Any students feel that studying is not important, boring and also can't see colorful pictures on there. Yeah, it is to get complicated. Book is very important in your case. As we know that on this age, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. Therefore , this Radiative Transfer in the Atmosphere and Ocean (Cambridge Atmospheric and Space Science Series) can make you sense more interested to read.

John Johnson:

What is your hobby? Have you heard that will question when you got pupils? We believe that that problem was given by teacher with their students. Many kinds of hobby, All people has different hobby. And also you know that little person like reading or as looking at become their hobby. You should know that reading is very important and also book as to be the point. Book is important thing to incorporate you knowledge, except your personal teacher or lecturer. You will find good news or update in relation to something by book. Many kinds of books that can you take to be your object. One of them is this Radiative Transfer in the Atmosphere and Ocean (Cambridge Atmospheric and Space Science Series).
