## **Drugs and Society: Behavioral Medicines and Abusable Drugs** Arthur P. Leccese

Through scientific methodology and research findings, this text attempts to provide answers to the emotional questions surrounding the effects of drugs on human behaviour and society. Covering a range of drugs, including those prescribed for behavioural disorders or recreational purposes, it applies a scientific approach to the topic. Covering psychopharmacology, theories of motivation for use and abuse, medical assessments of the primary dangers of acute and chronic drug use and the research methodology and classification system used to study these drugs, the text requires little or no previous background knowledge of psychology. Amongst the issues addressed are societal views of psychiatric medicines and abused drugs and how they affect drug abuse, and the special problems of using drugs to treat disorders involving excessive self-administration of recreational drugs. The basic pharmacology of every drug presented is outlined and there is thorough examination of how drug effects occur and their related tolerance, sensitization and physical dependence factors.
