**Sets, Logic and Maths for Computing (Undergraduate Topics in Computer Science)** David Makinson  
The first part of this preface is for the student; the second for the instructor. But whoever you are, welcome to both parts. For the Student You have finished secondary school, and are about to begin at a university or technical college. You want to study computing. The course includes some mathematics { and that was not necessarily your favourite subject. But there is no escape: some finite mathematics is a required part of the first year curriculum. That is where this book comes in. Its purpose is to provide the basics { the essentials that you need to know to understand the mathematical language that is used in computer and information science. It does not contain all the mathematics that you will need to look at through the several years of your undergraduate career. There are other very good, massive volumes that do that. At some stage you will probably find it useful to get one and keep it on your shelf for reference. But experience has convinced this author that no matter how good the compendia are, beginning students tend to feel intimidated, lost, and unclear about what parts to focus on. This short book, on the other hand, offers just the basics which you need to know from the beginning, and on which you can build further when needed.

### **From reader reviews:**

#### **Courtney O'Donnell:**

Information is provisions for individuals to get better life, information presently can get by anyone with everywhere. The information can be a expertise or any news even a concern. What people must be consider whenever those information which is inside former life are challenging to be find than now is taking seriously which one would work to believe or which one typically the resource are convinced. If you get the unstable resource then you understand it as your main information there will be huge disadvantage for you. All those possibilities will not happen with you if you take Sets, Logic and Maths for Computing (Undergraduate Topics in Computer Science) as your daily resource information.

#### **Ralph Overman:**

The actual book Sets, Logic and Maths for Computing (Undergraduate Topics in Computer Science) has a lot associated with on it. So when you check out this book you can get a lot of help. The book was published by the very famous author. This articles author makes some research before write this book. That book very easy to read you will get the point easily after reading this book.

#### **Violet Iverson:**

Playing with family in a park, coming to see the water world or hanging out with good friends is thing that usually you will have done when you have spare time, subsequently why you don't try point that really opposite from that. One activity that make you not feeling tired but still relaxing, trilling like on roller coaster you are ride on and with addition of knowledge. Even you love Sets, Logic and Maths for Computing (Undergraduate Topics in Computer Science), it is possible to enjoy both. It is great combination right, you still desire to miss it? What kind of hang-out type is it? Oh can happen its mind hangout guys. What? Still don't buy it, oh come on its referred to as reading friends.

#### **Rachel Haley:**

This Sets, Logic and Maths for Computing (Undergraduate Topics in Computer Science) is brand-new way for you who has curiosity to look for some information because it relief your hunger of knowledge. Getting deeper you onto it getting knowledge more you know or else you who still having tiny amount of digest in reading this Sets, Logic and Maths for Computing (Undergraduate Topics in Computer Science) can be the light food for you because the information inside this specific book is easy to get by simply anyone. These books acquire itself in the form and that is reachable by anyone, yes I mean in the e-book contact form. People who think that in book form make them feel tired even dizzy this e-book is the answer. So you cannot find any in reading a book especially this one. You can find what you are looking for. It should be here for anyone. So , don't miss the idea! Just read this e-book kind for your better life along with knowledge.
