Metal Casting Computer-Aided Design and Analysis B. Ravi

The flow of molten metal in the mould and subsequent solidification affect casting quality. In casting domain, software applications are still nascent and expensive, limiting their penetration to mainly large foundries. This book presents the scientific approach to casting development supported by computer modelling. It describes the influence of parameters related to cast product, tooling, and process on manufacturability, especially casting quality.

This book is intended for the students of engineering and information technology.
