Participation for Sustainability in Trade (Global Environmental Governance)

Participation for Sustainability in Trade (Global Environmental Governance)

Presenting extensive new research, this ground-breaking study addresses the critical dimensions of participatory and democratic processes in the field of trade-sustainability relationships and sustainability assessments of trade rules. The specific issues in trade include social and environmental concerns for which there is a wide disparity of preferences and no economic benchmark.

The contributors provide analytical responses to questions of how deliberative processes can adequately close the democratic gap in global governance and how institutional reforms can ensure better access to information, transparency, deliberation and more accountability. The book provides the necessary theoretical background as well as case studies to understand these issues and is suitable for students and academics in international law, international relations and economics.
