Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) Feng Wu

Visual information is one of the richest and most bandwidth-consuming modes of communication. To meet the requirements of emerging applications, powerful data compression and transmission techniques are required to achieve highly efficient communication, even in the presence of growing communication channels that offer increased bandwidth.

Presenting the results of the author's years of research on visual data compression and transmission, **Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications** provides a theoretical and technical basis for advanced research on visual data compression and communication.

The book studies the drifting problem in scalable video coding, analyzes the reasons causing the problem, and proposes various solutions to the problem. It explores the author's Barbell-based lifting coding scheme that has been adopted as common software by MPEG. It also proposes a unified framework for deriving a directional transform from the nondirectional counterpart. The structure of the framework and the statistic distribution of coefficients are similar to those of the nondirectional transforms, which facilitates subsequent entropy coding.

Exploring the visual correlation that exists in media, the text extends the current coding framework from different aspects, including advanced image synthesis—from description and reconstruction to organizing correlated images as a pseudo sequence. It explains how to apply compressive sensing to solve the data compression problem during transmission and covers novel research on compressive sensor data gathering, random projection codes, and compressive modulation.

For analog and digital transmission technologies, the book develops the pseudo-analog transmission for media and explores cutting-edge research on distributed pseudo-analog transmission, denoising in pseudo-analog transmission, and supporting MIMO. It concludes by considering emerging developments of information theory for future applications.

From reader reviews:

Gale Kizer:

Book is written, printed, or highlighted for everything. You can know everything you want by a e-book. Book has a different type. As it is known to us that book is important issue to bring us around the world. Beside that you can your reading expertise was fluently. A guide Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) will make you to always be smarter. You can feel more confidence if you can know about every thing. But some of you think that will open or reading some sort of book make you bored. It is far from make you fun. Why they could be thought like that? Have you seeking best book or suited book with you?

Renee Wood:

Do you have something that you like such as book? The book lovers usually prefer to pick book like comic, brief story and the biggest an example may be novel. Now, why not seeking Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) that give your pleasure preference will be satisfied through reading this book. Reading routine all over the world can be said as the way for people to know world far better then how they react when it comes to the world. It can't be stated constantly that reading routine only for the geeky particular person but for all of you who wants to possibly be success person. So , for every you who want to start looking at as your good habit, it is possible to pick Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) become your starter.

Robert Poulin:

You could spend your free time to read this book this book. This Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) is simple bringing you can read it in the playground, in the beach, train in addition to soon. If you did not have got much space to bring the particular printed book, you can buy the e-book. It is make you much easier to read it. You can save the particular book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.

Patricia Humes:

As we know that book is essential thing to add our information for everything. By a publication we can know everything we wish. A book is a set of written, printed, illustrated or blank sheet. Every year was exactly added. This publication Advances in Visual Data Compression and Communication: Meeting the Requirements of New Applications (Multimedia Computing, Communication and Intelligence) was filled in relation to science. Spend your extra time to add your knowledge about your technology competence. Some

people has distinct feel when they reading the book. If you know how big benefit of a book, you can sense enjoy to read a book. In the modern era like today, many ways to get book that you wanted.
