Gary Marchionini

Information Seeking in Electronic Environments (Cambridge Series on Human-Computer Interaction) Gary Marchionini

In the computer age, it is essential for individuals to develop skills and strategies for manipulating, storing, and retrieving electronic information. This book considers how electronic technologies have changed these skills and strategies and augmented the fundamental human activity of information seeking. Writing from the point of view of the user rather than the computer, the author makes a case for creating new interface designs that allow information seekers to choose what strategy to apply according to their immediate needs. Such systems may be designed by providing information seekers with alternative interface mechanisms for displaying and manipulating multiple levels of representation for information objects. This book is multidisciplinary in approach and aims to bridge the perspectives of information science, computer science and education. It will be essential reading for researchers and graduate students in these fields.
