Clinical Neuroendocrinology: v. 1

Clinical Neuroendocrinology: v. 1

Clinical Neuroendocrinology covers the clinical significance of the advances made in the understanding of relationships between the actions of neurotransmitters and the hypothalamic control of pituitary secretions. This book contains 24 chapters that examine the interactions of target gland secretions with the effects of hypothalamic and pituitary hormones.

This book begins with a discussion of the physiological regulation and clinical applications of thyrotropin-stimulating hormone and thyrotropin-releasing hormone. The subsequent chapters are devoted to neuroendocrine aspects, secretion, regulation, and analysis of gonadotropin and gonadotropin-releasing hormone. Other chapters explore the regulations, tests, therapeutic implications, and clinical physiology of growth hormones and prolactin. This text also considers the chemical nature, brain pathways, mode of action, and clinical significance of other hormones, including corticotropin-releasing factor, melanocyte-stimulating hormone release-inhibiting factor, melanocyte-stimulating hormone, and related pituitary peptides. The remaining chapters examine the control mechanisms and pathophysiology of vasopressin, oxytocin, and neurophysins.

Clinical neuroendocrinologists and researchers will find this book of great value.
